

Printed Circuit Engineering Professional –		
TABLE OF CONTENTS:		
Page	Sec	Chapter 1 Professional Overview:
1		Introduction
8	1.1	Printed Circuit Engineering Layout Overview – Profession overview
14	1.2	Basic Fabrication of a Printed Circuit Board - Materials and construction
39	1.3	Basic Assembly of a Printed Circuit Board - Materials and process
53	1.4	Basic Electronics in a PCB – Fundamental understanding and concepts
54	1.5	Basic Printed Circuit Engineering Layout Overview – Layout process
60	1.6	Project Management (PM) - Enabling project success and accountability
62	1.7	Communication - The value all throughout the process
Page	Sec.	Chapter 2 Circuit Definition and Capture:
69	2.1	Libraries to Bill of Material (BOM) – Integ. library: symbols, land patterns
93	2.2	Surface Mount and Thru-Hole Technology – Components and process
98	2.3	Schematic Types and Conventions – parameters and conventions
102	2.4	Schematic Symbol Placement – Orderly circuits improve comprehension
103	2.5	Schematic Review – Complete and accurate
104	2.6	Circuit Board Types – Rigid, Flex and Printed Electronics
107	2.7	IPC - MIL Standards and Specifications – Reference listing of standards
110	2.8	Verification, Testing, Compliance & Qual. Assurance – Accuracy
117	2.9	Mechanical Board Information –Physical requirements
127	2.10	Database Links and Iterative Data Exchange – Development iterations
Page	Sec.	Chapter 3 Board Layout Data and Placement:
132	3.1	Set Up Board Parameters – CAD - Working environment
137	3.2	Stackup Design – Z-Axis relationship
172	3.3	Constraints and Rules – Define and implement accurate reliability
177	3.4	Placement for Assembly – Performance and buildability
186	3.5	Placement of Components – Solvability, performance and manufacturing
194	3.6	Schematic Driven Placement - Integrated cross-probing
198	3.7	Placement Dense Digital Circuits – Large Scale Integration
207	3.8	Placement Power Delivery - Source, Distribution and Usage
214	3.9	Placement Mixed Circuit (RF/HSD) – Independently together
216	3.10	Placement Review Milestone – Approval to proceed into routing
Page	Sec.	Chapter 4 Circuit Routing and Interconnection:
218	4.1	General Overview of Routing – Fundamental parameters
230	4.2	Routing Dense Digital Circuits – Modular approach
240	4.3	Routing with Signal Integrity Applications – Managing energy fields
254	4.4	Routing Power Delivery - Source, Distribution and Usage
259	4.5	Routing RF Circuits – Managing Dissipation and Loss
266	4.6	Routing Review Milestone – Approval to proceed into routing

Page	Sec.	Chapter 5 Flex Printed Circuits (FPC):
269	5.1	Flex and Rigid-Flex Technology - Overview and Introductions to FPC
271	5.2	Flexible Printed Circuit Types – IPC established definition
275	5.3	Flexible Circuits Applications – Industry sectors and usage
276	5.4	Materials for Flexible Circuits – Properties and process
280	5.5	Design Start Considerations – Physical and electrical overview
282	5.6	FPC Stack-up Constructions – Usage and process
284	5.7	Flex Design Practices – Physical and electrical aspects
294	5.8	Production Process Consideration – Process flow overview
296	5.9	Conductive Surface Finishes – Overview of types and process
297	5.10	Stiffeners – Types and applications
299	5.11	Shielding Material – EMI and EMC considerations
300	5.12	Design for Fabrication & Assembly – Unique concerns building FPC
Page	Sec.	Chapter 6 Documentation and Manufacturing Preparation:
303	6.1	Documentation Overview – Prepare for the final design effort
304	6.2	Resequencing Reference Designators – Back-annotation
306	6.3	Silkscreen – Providing visual intelligence
312	6.4	Industry Standards – Design, document and build compliance
319	6.5	Post-processing Procedure – Know what to expect at you company
320	6.6	Manufacturing Deliverables - Documentation overview
322	6.7	Fabrication Drawing – Instructions to fabricate the bare board
335	6.8	Assembly Drawing – Reference drawing used to assemble the PCA
340	6.9	Schematic Database and Drawing – Circuit capture and BOM origin
344	6.10	Bill of Materials (BOM) – Controlling document
346	6.11	Final Deliverables – Formats and creation process
351	6.12	Transfer to Manufacturer – Manufacturing interface
		(During the review class, cursory coverage of the material in this section due to the in-depth nature of this subject.)
Page	Sec.	Chapter 7 Advanced Electronics, EM Applications:
355	7.1	Energy Movement in Circuits – Introductory overview of EM Theory
357	7.2	Critical Frequencies in Circuits on PC Boards Frequency and Rise Time (Tr)
359	7.3	Transmission Lines in PC Boards – Relational nature in electronics
366	7.4	Understanding Impedance of Transmission Lines – Modification from layout
370	7.5	Impedance Control of Transmission Lines – Controlling impedance in layout
379	7.6	Controlling Impedance of Digital ICs - Controlled and set to specific values
384	7.7	Controlling Noise Margin – Critical lengths understanding
393	7.8	Crosstalk and Cross-coupling - Capacitive and inductive coupling
398	7.9	Controlling Timing of High Speed Lines – Timing matched, not length
402	*	Abbreviations
406	*	Acknowledgements
